Education

Oregon State University College of Engineering

Honors Bachelors of Science in Computer Science

- Graduated Summa Cum Laude
-

Experience

Amazon Web Services - Elemental MediaConnect

Software Development Engineer II (*April 2025 - Present*)

- Mentored an intern through the design and implementation of a health monitoring and automatic recovery system for a fleet of tens of thousands of EC2 hosts, eliminating the need for manual operator intervention and reducing out-of-hours pages by over 75%
- Led two cross-team integrations with other AWS services to build resilient mechanisms for orchestrating multi-stage video contribution pipelines in the cloud, replacing fragile integrations configured manually by customers

Software Development Engineer I (*July 2023 - April 2025*)

- Developed the global video router for the AWS MediaConnect service to securely and reliably transport live video across a multi-region distributed cloud system, seeing use in major live broadcast events including the 2026 Winter Olympics
- Added CloudFormation support for AWS MediaConnect resources to enable customers to declaratively define complex video workflows through infrastructure-as-code

Software Development Engineer Intern (*June 2022 - September 2022*)

- Developed a new static video source protocol for AWS MediaConnect Flows to reduce testing costs by 90% and improve test reproducibility

Pluto Health

Software Engineer (*June 2021 - June 2023*)

- Designed and implemented a system from the ground-up to parse medical records and provide patients with meaningful insights about their health data and match them with relevant clinical trials
-

Technical Skills

- | | | | | | |
|--------------------|--------------|---------|-------------|----------|-----------|
| • TypeScript | • Python | • C/C++ | • Java | • Scala | • Golang |
| • React and NextJS | • PostgreSQL | • AWS | • AI Agents | • Docker | • MPEG TS |

Portfolio

jsFLAP

- The Javascript Formal Languages and Automata Package for constructing and simulating finite state automata for education about the theory of computation. Created as an honors thesis project at Oregon State University, jsFLAP is currently seeing educational use in two universities.

ForeSight

- Smart glasses for visually impaired people that use stereo cameras and AI computer vision to provide detailed, depth-aware information about obstacles in the user's environment. Finalist project at the Regeneron International Science and Engineering Fair world championship.
